## Circuit

## Protection

## IEC 60947-2, EN60947-2, GB 14048.2

The JB is a DC circuit breaker dedicated to multistring photovoltaic installations. This circuit breaker is designed to protect the cables located between eac string of photovoltaic moduls and the photovoltaic inverter against
overloads and short circuits (see application diagram) overloads and shortircuts (see application diagram).
Combined with a switch, the JB will be installed in a string PV protection enclosure at the end of each string of photovoltaic modules.

It can be locked (by a padlocking device) in Off position as a safety measure for removal of the PV inverter. the reverse direction to the operating current,

To ensure the safety of the installation, it is necessary, depending on the
various types of application, to combine the $/ B$ with. various types of applecion,

- a fault passage detector (insulation monitoring
- an earth protection circuit breaker at the DC end In all cases, fast action on site will be required to clear the fault (protection not ensured in the event of a double fault).
$J B$ is not polarity sensitive: ( + ) and ( - ) wires can inversed without any risk. The JB is: delivered with three inter-pole barrier to provide increased isolation distance between two adjacent connectors.

Meaning and Classification Models

| JB- $\square \square$ |  |  |  |  | $\square$ |

## Technical Data

- Position contact indication-suitability for isolation according to IEC/EN 60947-2 standard.
- The presence of the green strip guarantees physical opening of the contacts and allows operations to be performed on the downstream circuit in complete safety.
- Increased product service life thanks to fast closing independent of the speed of actuation of the toggle.
- Pre-wired product: Input/ Output on the same side.

| Main Characteristics |  |  |
| :--- | :--- | :--- |
| Rated service breaking capacity (Ics) |  | $100 \%$ of the Icu |
| Endurance (O-C) | Electrical | 1,500 cycles (where L/R=2 ms) |
