Requirement	Applied Standards	Document Evidence	Result
EMC	EN IEC 61000-6-1:2019	Test Report:	Conform
Directive	EN IEC 61000-6-3:2021	AGC-WH00199220716EE01	Conform

Signed by General Manager(Bram Wu)

Issue Date: August 1, 2022

This Attestation of Conformity is recognized by Attestation of Global Compliance (Wuhan) Co., Ltd. and made in accordance with the Electromagnetic Compatibility (EMC) Directive 2014/30/EU. The attestation doesn't imply assessment of the production. The Applicant of the attestation is authorized to use this attestation in connection with EC declaration of conformity to the Directive. The attestation is only applicable to the equipments described above. This attestation shall not be re-produced except in full without the written approval of Attestation of Global Compliance (Wuhan) Co., Ltd.

The above equipment was tested by Attestation of Global Compliance(Wuhan) Co., Ltd.for compliance with the requirements set forth in the Technical Standards mentioned above. This said equipment in the configuration described in this report shows the maximum emission levels emanating from equipment and the level of the immunity endurance of the equipment are within the compliance requirements. The test results of this report relate only to the tested sample identified in this report.

# 3. MEASUREMENT UNCERTAINTY

The uncertainty is calculated using the methods suggested in the "Guide to the Expression of Uncertainty in measurement" (GUM) published by CISPR.

- Uncertainty of Conducted Emission, U = 2.6dB
- Uncertainty of Radiated Emission 30MHz $\sim$ 1GHz, U = 4.0dB

Any report having not been signed by authorized approver, or having been altered without authorization, or having not been stamped by the Dedicated Teach (Inspection Stamp" is deemed to be invalid. Copying or excerpting portion of, or altering the content of the report is not permitted without the written eighorization of AGC the test results presented in the report apply only to the tested sample. Any objections to report issued by AGC should be submitted to AGC within 15days after the issue of eight the test report. Further enquiry of validity or verification of the test report should be addressed to AGC by agc.wuhan@agc-cert.com.

#### 8.2. BLOCK DIAGRAM OF TEST SETUP

#### 8.3. PROCEDURE OF LINE CONDUCTED EMISSION TEST

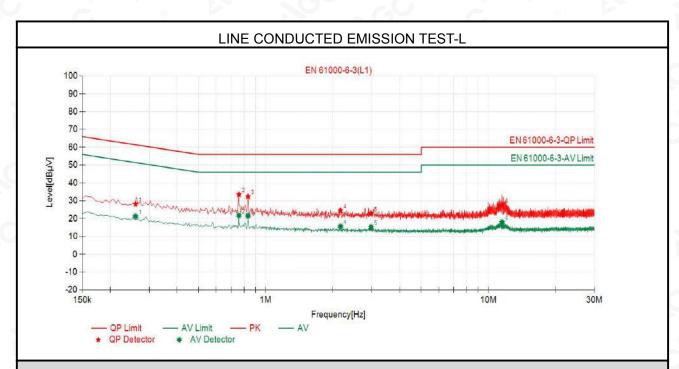

- (1) The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. When the EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per EN 61000-6-3 (see Test Facility for the dimensions of the ground plane used). When the EUT is a floor-standing equipment, it is placed on the ground plane which has a 3-12 mm non-conductive covering to insulate the EUT from the ground plane.
- (2) Support equipment, if needed, was placed as per EN 61000-6-3
- (3) All I/O cables were positioned to simulate typical actual usage as per EN 61000-6-3
- (4) The EUT received DC24V power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane. Communicate during the test.
- (5) All support equipments received power from a second LISN supplying power, if any.
- (6) The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- (7) Analyzer / Receiver scanned from 150kHz to 30MHz for emissions in each of the test modes.
- (8) During the above scans, the emissions were maximized by cable manipulation.
- (9) A scan was taken on both power lines, Line 1 and Line 2, recording at least the six highest emissions.
- (10) Emission frequency and amplitude were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit. If EUT emission level was less –2dB to the A.V. limit in Peak mode, then the emission signal was re-checked using Q.P and Average detector.

#### Note:

QP/AV Value(dBuV/m)=Reading(dBuV)+Factor(dB/m)
Factor(dB/m)= Cable loss(dB)+Attenuation(dB)for Attenuator
QP/AV Margin= QP/AV Limit - QP/AV Value

Any report having not been signed by authorized approver, or having been altered without authorization, or having not been stamped by the "Dedicated residual Inspection Stamp" is deemed to be invalid. Copying or excerpting portion of, or altering the content of the report is not permitted without the written exhorization of AGC The test results presented in the report apply only to the tested sample. Any objections to report issued by AGC should be submitted to AGC within 15days after the issue of each report. Further enquiry of validity or verification of the test report should be addressed to AGC by agc.wuhan@agc-cert.com.

# 9. RADIATED EMISSION TEST

# 9.1. LIMITS OF RADIATED DISTURBANCES

Limits for radiated disturbance 30MHz to 1 GHz at a measurement distance of 3 m					
Frequency range (MHz)	Quasi peak limits(dB $\mu$ V/m)				
30 - 230	40				
230 - 1000	47				

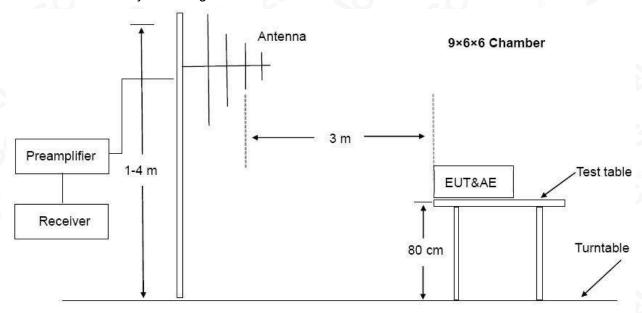

Limits for radiated disturbance	e 1.0GHz to 6.0GHz at a measure	ement distance of 3 m
Frequency range (GHz)	Peak limits(dB μ V/m)	Average limits(dB $\mu$ V/m)
1.0 – 3.0	o 70	50
3.0 – 6.0	74	54

#### Notes:

- 1. The lower limit shall apply at the transition frequency.
- 2. Additional provisions may be required for cases where interference occurs.

# 9.2. BLOCK DIAGRAM OF TEST SETUP

System Diagram of Connections between EUT and Simulators

Any report having not been signed by authorized approver, or having been altered without authorization, or having not been stamped by the Dedicated Pestito/Inspection Stamp" is deemed to be invalid. Copying or excerpting portion of, or altering the content of the report is not permitted without the written exthorization of AGE, the test result presented in the report apply only to the tested sample. Any objections to report issued by AGC should be submitted to AGC within 15days after the issue of the test report Further enquiry of validity or verification of the test report should be addressed to AGC by agc.wuhan@agc-cert.com.

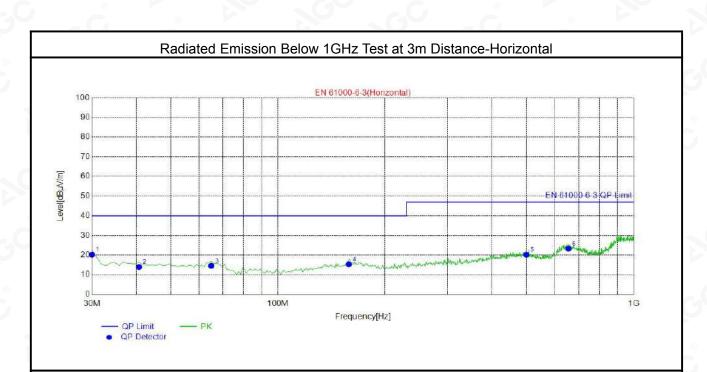

#### 9.3. PROCEDURE OF RADIATED EMISSION TEST

- (1) The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. When the EUT is a tabletop system, a wooden turntable with a height of 0.8 meters is used which is placed on the ground plane as EN 61000-6-3 (see Test Facility for the dimensions of the ground plane used). When the EUT is a floor-standing equipment, it is placed on the ground plane which has a 3-12 mm non-conductive covering to insulate the EUT from the ground plane.
- (2) Support equipment, if needed, was placed as EN 61000-6-3.
- (3) All I/O cables were positioned to simulate typical actual usage as EN 61000-6-3.
- (4) The EUT received DC 24Vpower from socket under the turntable, if any. Communicate during the test.
- (5) The antenna was placed at 3 meter away from the EUT as stated in EN 61000-6-3. The antenna connected to the Analyzer via a cable and at times a pre-amplifier would be used.
- (6) The Analyzer / Receiver quickly scanned from 30MHz to 1000MHz. The EUT test program was started. Emissions were scanned and measured rotating the EUT to 360 degrees and positioning the antenna 1 to 4 meters above the ground plane, in both the vertical and the horizontal polarization, to maximize the emission reading level.
- (7) The test mode(s) were scanned during the test:
- (8) Recorded at least the six highest emissions. Emission frequency, amplitude, antenna position, polarization and turntable position were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit and Q.P./Peak reading is presented.

Any report having not been signed by authorized approver, or having been altered without authorization, or having not been stamped by the Dedicated Festing/Inspection Stamp" is deemed to be invalid. Copying or excerpting portion of, or altering the content of the report is not permitted without the written entering the test result presented in the report apply only to the tested sample. Any objections to report issued by AGC should be submitted to AGC within 15day after the issue of the test report report and addressed to AGC by agc.wuhan@agc-cert.com.

#### 10.2. TEST PROCEDURE

The test procedure shall be in accordance with IEC 61000-4-2. Electrostatic discharges shall be applied only to points and surfaces of the EUT which are expected to be touched during normal operation, including user access operations specified in the user manual, for example cleaning or adding consumables when the EUT is powered. The application of discharges to the contacts of open connectors is not required.

The number of test points is EUT dependent. Subclause 8.3.1 and Clause A.5 of IEC 61000-4-2 shall be taken into consideration when selecting test points, paying particular attention to keyboards, dialling pads, power switches, mice, drive slots, card slots, the areas around communication ports, etc.

When applying direct discharges to a portable or handheld battery-powered EUT with a display screen, it may not be possible to observe the screen for a given EUT orientation. If observation of the screen is necessary during this test, the EUT may be mounted vertically using non-metallic supports.

**Note:** As per the A2 to IEC 61000-4-2, a bleed resistor cable is connected between the EUT and HCP during the test.

The electrostatic discharges were applied as follows:

Voltage	Coupling	<b>Test Performance</b>	Result A	
±4kV	Contact Discharge	No function loss		
±4kV	Indirect Discharge HCP (Front)	No function loss	А	
±4kV	Indirect Discharge HCP (Left)	No function loss	А	
±4kV	Indirect Discharge HCP (Back)	No function loss	А	
±4kV	Indirect Discharge HCP (Right)	ge HCP (Right) No function loss		
±4kV	Indirect Discharge VCP (Front)	No function loss	Α	
±4kV	Indirect Discharge VCP (Left)	No function loss	Α	
±4kV	Indirect Discharge VCP (Back)	No function loss	Α	
±4kV	Indirect Discharge VCP (Right)	No function loss	Α	
±8kV	Air Discharge	No function loss	Α	

Any report having not been signed by authorized approver, or having been altered without authorization, or having not been stamped by the "Dedicated residual Inspection Stamp" is deemed to be invalid. # 10.3. PERFORMANCE & RESULT

Criteria A:	The apparatus continues to operate as intended. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. In some cases the performance level may be replaced by a permissible loss of performance.
Criteria B:	The apparatus continues to operate as intended after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. In some cases the performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is however allowed.
Criteria C:	Temporary loss of function is allowed, provided the functions self recoverable or can be restored by the operation of controls.

#### 15.2. TEST PROCEDURE

The EUT shall be subjected to the test magnetic field by using the induction coil of standard dimensions (1m × 1m). The induction coil shall then be rotated by 90° in order to expose the EUT to the test field with different orientations.

# **Test Conditions:**

Frequency	Polarity	Level	Test Performance	Performance Result
50 Hz,60Hz	X	3 A/m	No function loss	A
50 Hz,60Hz	Y	3 A/m	No function loss	Α
50 Hz,60Hz	Z	3 A/m	No function loss	A _C

# 15.3. PERFORMANCE & RESULT

Criteria A:	The apparatus continues to operate as intended. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. In some cases the performance level may be replaced by a permissible loss of performance.
Criteria B:	The apparatus continues to operate as intended after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. In some cases the performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is however allowed.
Criteria C:	Temporary loss of function is allowed, provided the functions self recoverable or can be restored by the operation of controls.
